HTML & CSS INTERNSHIP PROJECT

Complete Project Brief • Instructions • Submission Checklist

PROJECT TITLE	**Personal Portfolio Website**
TECHNOLOGIES	HTML5 and CSS3 only
LEVEL	Beginner-friendly internship project
SUBMISSION DEADLINE	**16 October 2026**
DELIVERABLE	Website source files + screenshots (and optional hosted link)

Your task is to plan, build, style, test, and submit a responsive portfolio website that introduces you and presents your skills, projects, and contact information.

Prepared for HTML & CSS Internship Students

1. Project Overview

Build a clean, professional personal portfolio website. The website should help a student introduce themselves, show technical skills and academic projects, and provide a way for visitors to contact them. Use semantic HTML for structure and CSS for layout, colours, typography, spacing, and responsive behaviour.

Learning objectives

- Structure a webpage with HTML5 semantic elements.
- Use CSS selectors, the box model, spacing, typography, colours, and backgrounds.
- Create navigation links and clearly organised content sections.
- Use Flexbox and/or CSS Grid to arrange cards and page sections.
- Make the page responsive for mobile, tablet, and desktop screens.
- Test the website and organise project files for submission.

Required website sections

- **1. Header / Navigation:** your name or logo and links to Home, About, Skills, Projects, and Contact.
- **2. Hero / Home:** name, role or career goal, a short introduction, and a button that links to Projects or Contact.
- **3. About Me:** a short biography, education, and career interests.
- **4. Skills:** at least 5 relevant skills shown as labels, chips, or cards.
- **5. Projects:** at least 2 project cards with a title, short description, and technologies used.
- **6. Contact:** email address and at least one other contact or profile link (use sample details if preferred).
- **7. Footer:** copyright line and your name.

Design direction

Choose a consistent colour palette (2–4 main colours), readable fonts, sufficient contrast, and a clear visual hierarchy. You may add a profile image or illustration, but it is optional. Use your own content and design choices rather than copying a complete template.

2. Functional and Technical Requirements

HTML requirements

- Use a valid HTML5 document structure: , html, head, and body.
- Set the page title and character encoding; include a viewport meta tag for mobile screens.
- Use semantic tags where suitable, such as header, nav, main, section, article, and footer.
- Use headings in a logical order and meaningful text for links.
- Add alt text to meaningful images.
- Use section IDs so navigation links can jump to the correct section.

CSS requirements

- Keep styling in a separate **style.css** file linked from HTML.
- Use CSS variables for at least the main colours, if comfortable.
- Use Flexbox or CSS Grid for at least one layout.
- Add a responsive media query for smaller screens.
- Style buttons, navigation links, and project cards with hover or focus states.
- Avoid horizontal overflow and ensure text is readable on a phone.

Important limitation

This is an HTML and CSS internship project. Do not use JavaScript, React, Bootstrap, backend code, or a database for the core submission. Contact forms do not need to send data; a styled form is optional. If you include a form, clearly state that it is a visual demo only.

Suggested folder structure

```
portfolio-project/
■■■ index.html
■■■ style.css
■■■ images/
■ ■■■ profile.jpg (optional)
■■■ screenshots/
■■■ desktop.png
■■■ mobile.png
```

Tools you can use

Visual Studio Code (or another text editor), Google Chrome or Microsoft Edge, and browser developer tools. No paid software is required.

3. Step-by-Step Development Plan

Step 1 — Plan

- Write down your name, short introduction, education, skills, two projects, and contact details.
- Choose a colour palette and sketch a simple page layout on paper.

Step 2 — Build the HTML

- Create a project folder and add index.html and style.css.
- Build the navigation and each required section in the order listed in this guide.
- Add section IDs, text, project cards, and image alt text.

Step 3 — Style with CSS

- Start with global styles for body, headings, links, and buttons.
- Style the header, hero section, skills, project cards, contact section, and footer.
- Use spacing consistently and align content using Flexbox or Grid.
- Add hover/focus effects and a media query for smaller screens.

Step 4 — Test

- Open index.html in a browser and click every navigation link.
- Check at desktop width and at a narrow mobile width.
- Confirm there are no missing images, broken links, or horizontal scrollbars.
- Correct spelling, alignment, contrast, and spacing issues.

Step 5 — Prepare submission

- Save all source files in one folder.
- Capture one desktop screenshot and one mobile screenshot.
- If you host the website, include the public URL; hosting is optional.
- Submit the project using the official form before the deadline.

4. Suggested starter structure

Use this as a guide, not as a complete finished solution. Write your own content and styling.

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Your Name | Portfolio</title>
  <link rel="stylesheet" href="style.css">
</head>
<body>
  <header>...navigation...</header>
  <main>...your sections...</main>
  <footer>...copyright...</footer>
</body>
</html>
```

5. Submission Instructions

Submit the following items through the official project submission form:

- **Source code:** index.html and style.css, plus any images/assets used.
- **Screenshots:** one desktop view and one mobile view.
- **Project description:** 3–5 sentences explaining the website and the features you built.
- **Hosted link:** optional; if provided, check that it opens without requiring a login.

Recommended upload method

- Put all project files into a folder named **YourName_HTML_CSS_Portfolio**.
- Compress the folder into a ZIP file if the form accepts file uploads.
- If the form asks for a repository or hosted URL, paste the correct public link and verify it.

Official project submission form

https://docs.google.com/forms/d/e/1FAIpQLSfLJkwxKh8nHF1u6hj803j_x3hg5DavCNK41N0Vto9ZEmLdoA/viewform?usp=header

Deadline: 16 October 2026

The submission form will close after 16 October 2026. Late submissions will not be accepted through this form. Certificate issuance is scheduled to begin after the submission deadline; submitting a project does not mean the certificate is issued immediately.

6. Evaluation Rubric

Criteria	What will be checked	Weight
HTML structure	Valid structure, semantic sections, useful content, working navigation anchors	25%
CSS and visual design	Consistent styling, typography, colours, spacing, card/button design	25%
Responsive layout	Usable on mobile and desktop; no horizontal overflow	20%
Completeness	All required sections, at least 5 skills and 2 project cards	15%
Code quality and submission	Organised files, readable code, screenshots, clear project description	15%

7. Final Checklist

Before submitting, make sure every item below is complete:

- ■ I created index.html and style.css.
- ■ My page includes Home, About, Skills, Projects, Contact, and Footer sections.
- ■ I included at least 5 skills and 2 project cards.
- ■ All navigation links jump to the correct sections.
- ■ My CSS uses Flexbox or Grid and includes a mobile media query.
- ■ The website looks readable on a desktop and a mobile screen.
- ■ Images load correctly and have suitable alt text where needed.
- ■ I checked spelling, colours, contrast, and spacing.
- ■ I captured desktop and mobile screenshots.
- ■ My files are organised and ready to upload.
- ■ I submitted the form before 16 October 2026.

Common mistakes to avoid

- • Submitting only screenshots without the HTML and CSS source files.
- • Using a desktop-only layout that breaks on mobile.
- • Leaving sample text such as “Lorem ipsum” or broken image paths.
- • Copying a complete website without understanding or adapting it.
- • Waiting until the final day to test or submit.

Academic integrity and originality

You may use documentation and learning resources to understand HTML and CSS. Your submitted project should reflect your own work. If you use a starter template, disclose it and make meaningful changes. Do not include private information such as personal home address or sensitive identity documents.

You can do it!

Focus on clean HTML, thoughtful CSS, responsive design, and a complete submission. A simple website that works well is better than a complicated website that is unfinished.
